SUMMARY

Full-stack engineer with 6+ years building production systems across medtech and fintech, from embedded hardware to AWS. At Dosell I automated dispenser alarm processing with a cloud OCR pipeline (80% less manual work) and led the Flutter app behind a 1M SEK ARR milestone. Previously built a Bitcoin ATM network deployed across Spain, end to end from device protocols to backend. Works across Python/Django, TypeScript/Node, Flutter, AWS and Terraform, and owns systems from design to production.

EXPERIENCE

Dosell AB

Stockholm, Sweden

Full Stack Engineer

Dec 2022 - Present

- Built a cloud OCR automation system with Django/Celery on AWS to eliminate manual alarm processing bottlenecks at ICE Malaga, reducing manual intervention by 80% and improving response times by 60%.
- Led development of Dosell's first hybrid application (Flutter) within a 2-month deadline to close procurement gaps, enabling a Finnish deal of 500-1000 units and securing the 1M SEK ARR milestone.
- Built an evaluation pipeline that replays resolved production alarms through the dispenser's cut-position model flow, reporting human-vs-model accuracy per resolution type with visual audit reports to guide model rollout.
- Built an incremental DocumentDB-to-PostgreSQL analytics sync with schema migrations and tests, provisioned with Terraform across dev and production environments.
- Designed a microservices architecture with NestJS, PostgreSQL and event-driven patterns to replace legacy systems, increasing throughput 3x and reducing latency from 2000ms to 300ms.
- Architected React.js/Next.js medical applications with code splitting and responsive design, improving load times by 40% and achieving 99.9% uptime.

Matrix Network International B.V.

Remote

Software Engineer

Apr 2020 - Nov 2022

- Architected a complete Bitcoin ATM platform with hardware integration (MDB protocol, bill and coin acceptors), backend microservices and Bitcoin mainnet/Lightning Network support, deploying 22 ATMs across Spain for secure cash and debit transactions.
- Built real-time transaction processing, KYC compliance and a remote monitoring dashboard to operate the full ATM network across Spain.
- Built the Venrecarga mobile recharge service with a multi-provider payment gateway (bunq, Stripe, PayPal, OpenNode), serving the Venezuelan diaspora worldwide during the economic crisis.
- Developed the Remitbit cryptocurrency remittance service with KYC/AML checks and an ETL pipeline (S3 to MySQL via Athena), processing EUR 10,000+ in Bitcoin transfers in its first month.

PROJECTS

Taxi License Exam Prep | Full Stack Developer (Flutter + Django)

2023 - Present

- Built and operate a cross-platform exam-prep app (Flutter + Django REST) for Swedish taxi driver and taxi company licensing exams, supporting 10+ languages for multilingual driver communities.
- Implemented practice tests, explanations and progress tracking backed by a Django REST API with multilingual content management and authentication, on iOS and Android.

Cashy | AI/Data & Full Stack Developer

2023 - 2024

- Integrated Fortnox and Swedbank APIs to give SME lenders real-time cashflow insight, with Python models projecting invoices, expenses, salaries and profit trends.
- Built a Next.js dashboard with cashflow visualisations and predictive analytics to support lending decisions and company evaluation.

AI-Powered CV Generator | Creator

2024 - Present

- Built a YAML-driven CV builder (Python, LaTeX, Docker) with a CLI that uses Claude Code to tailor CVs to job descriptions across multiple themes; helped 15+ people in my network land interviews and offers.

SKILLS

Python: Django, Django REST Framework, Celery, pandas

JavaScript/TypeScript: Node.js, NestJS, Express.js, React.js, Next.js

Mobile: Flutter, Dart

AWS & Infrastructure: Terraform, S3, EC2, Lambda, RDS, DocumentDB, DynamoDB, SQS, Athena, CloudWatch, CloudFront, Docker, CI/CD, Linux

Databases: PostgreSQL, MySQL, SQL Server, Oracle DB, MongoDB, DynamoDB, Firestore

System Design: Microservices, event-driven architecture, Kafka, RabbitMQ, Elasticsearch/OpenSearch, Airbyte, ETL pipelines

Hardware: ESP32/ESP8266, Raspberry Pi, MDB protocol, bill & coin validators, serial communication, vending machines

AI Tools: Claude Code, GitHub Copilot, OpenAI, Gemini, Ollama, n8n

AWARDS & ACHIEVEMENTS

– Oracle Certified Java Master Trainer

– Oracle Certified Java Foundations

EDUCATION

Blekinge Institute of Technology

MS Computer Science

University of Gujrat

BS Computer Science

Karlskrona, Sweden

2022 - Present

Gujrat, Pakistan

2016 - 2020
